

Dami Hundeyin

Senior Software Engineer | Cloud & System Infrastructure | AI Integration
[647-289-2543](tel:647-289-2543) • damihundeyin@gmail.com • linkedin.com/in/hundy • [Github](https://github.com)

SKILLS

Languages & Frameworks: C#, Javascript, Node.js, React, Angular, .NET, Python, FastApi, Django, Flask.
Cloud & platforms: AWS, Docker, Kubernetes, Azure, Azure DevOps, Terraform, Pulumi, Vercel, Salesforce,
Monitoring & Observability: SumoLogic, CloudWatch, PagerDuty, New Relic, Grafana, DataDog, OpenTelemetry.
Databases & Storage: MS SQL, PostgreSQL, MongoDB, Chroma, Pinecone, Oracle, Cassandra, Redis, Databricks.
AI & ML: PyTorch, Keras, Scikit-learn, OpenAI APIs, Ultralytics, OpenCV, LangChain, CrewAI, Cursor, MCP.

WORK EXPERIENCE

Senior Software Engineer (Distributed Systems) — Flynn, Toronto, Ontario Oct 2023 — Present

- Led the migration from a single-tenant to a multi-tenant architecture, designing a secure database-level tenant isolation model with zero cross-tenant data leakage and 100% data integrity. Delivered in 3 months, enabling scalable onboarding of acquired companies.
- Delivered a real-time technician scheduling module using event-driven architecture and async messaging with .NET, Kafka, Angular, Typescript and Websockets supporting ~3K users across 20 time zones, reducing logistics and resource allocation overhead by 30%.
- Partnered with R&D and Stakeholders to optimize high traffic API's (12K+ req/s) and standardize monitoring and alerting, reducing p95 latency by 54%, on-call incidents by 21%, and overall response times by 15%.
- Restored and Containerized 6 legacy cloud-hosted .NET CI/CD pipelines using Azure DevOps and Pulumi which achieved production stability with near-zero downtime and 75% faster recovery.

Backend Application Developer II — Procom, Toronto, Ontario Feb 2022 — Oct 2023

- Designed and deployed a high-availability, event-driven .NET microservice to ingest 400K+ job postings from Bullhorn (ATS), eliminating 90% manual data entry while improving pipeline scalability, and fault tolerance through retry and batching strategies.
- Built a production grade AI Resume Copilot leveraging LangChain and OpenAI LLMs (RAG-based pipeline with embeddings), improving job-candidate matching accuracy and driving an 8% increase in successful applications at scale.
- Re-architected 4 microservices to implement a collection-level in-memory caching layer with configurable TTL and eviction policies for static entities, improving overall performance by 14% while reducing latency and load under high traffic.
- Mentored and led code reviews for five engineers across the U.S. and Canada, driving adoption of clean architecture, testability, and resilient release practices, increasing feature delivery velocity by 30%.

ML/Backend Software Engineer II — Pronti, Kitchener, Ontario Jan 2021 — Feb 2022

- Maintained 99.5%+ uptime during a viral growth event by scaling and stabilizing EKS clusters and container workloads (auto-scaling) and enhancing monitoring/alerting, supporting user growth from 352K to 868K+.
- Developed and deployed eight production-grade computer vision pipelines using YOLO and ResNet, improving clothing detection and classification accuracy by 75% through optimized training and inference pipelines at scale.
- Built and deployed an OCR-powered Chrome extension leveraging GCP Vision API and a Flask (Python) backend to extract and structure clothing data from email receipts, achieving 9K+ downloads with reliable, scalable data processing.
- Orchestrated a zero-downtime cloud migration from AWS to GCP, transferring 12TB of data via RClone and migrating datastores using GCP Database Migration Service and Cloud DNS, reducing monthly infrastructure costs by ~\$6,540.

Back-end Engineer — Talk360 (Payment Services, Contract), Remote Feb 2020 — Jan 2021

- Implemented a fault-tolerant PostgreSQL-based state machine with transactional consistency and idempotent workflows to standardize payment ledger status flows, reducing mismatch errors by 99% and ensuring predictable payment tracking.
- Enhanced payment security by integrating Onfido KYC and implementing HMAC-based URL signing with expiry and replay protection, reducing fraud and payment tampering risk across high-volume transactions.
- Integrated multiple payment processors (PayPal, Adyen, Stripe, Paytm) and designed a real-time weighted ranking engine based on user context (location, prior usage, currency), increasing payment completion rates by 17%.

Frontend Engineer (Intern - Junior) — Talenture Group, Remote Feb 2018 — Jan 2020

- Collaborated in developing a React.js frontend for a recruitment platform, improving SEO and performance, building reusable component libraries, and delivering CMS-driven landing pages to support scalable content and user growth.

PROJECTS

Drafter - Embedded AI consultation tool for businesses (ongoing) | [Backend](#) [Frontend](#)

Architecting a multi-tenant SaaS platform with a FastAPI backend and Next.js frontend, leveraging a RAG-based pipeline with LangChain and OpenAI LLMs to automate proposal generation, targeting a 60% reduction in client onboarding time.

Image Search - Object detection and classification for bulk images | [Github](#)

Developed a scalable image search application for large image datasets, enabling class-based filtering using Ultralytics YOLO models, with a Python backend and Gradio interface for efficient, real-time exploration and retrieval.

EDUCATION

Post-Graduate Diploma (PGD), Web Design & Development - Conestoga College, Waterloo, ON, CA | 2017 - 2018

Bachelor of Science ([B.Sc](#)), Computer Science - De Montfort University, Leicester, UK | 2014 - 2016
